PROTECT YOUR ENTIRE FAMILY

PROFESSIONAL GRADE LOW-LEVEL CO MONITOR

Ask your NCI-Certified Contractor how an NSI 6000 Monitor can help keep your home safe and healthy

NSI 6000 MONITOR True Protection for All Ages

- ☑ Provides protection for all age groups and conditions, especially infants, children, the elderly, and highly sensitive people. Other alarms barely provide minimal protection for healthy adults.
- ☑ Alerts you of a problem before reaching dangerous, even deadly carbon monoxide (CO) levels, long before the other CO detectors even begin to work.
- ☑ Employs the same electrochemical sensor technology found in professional CO analyzers that cost thousands of dollars. This monitor is calibrated using CO, not electrical guesswork!
- ☑ New Bluetooth smart device app allows you to sync with your mobile devices, store and review history, and much more!

Facts You Should Know to Protect Your Family

WHY DO I NEED A LOW-LEVEL MONITOR?

The NSI 6000 low-level monitor senses CO levels as low as 5 PPM (parts per million). Infants, children, elderly, persons with respiratory or heart ailments are provided little or no protection from deadly CO with standard alarms. Long-term exposure to low-level CO above 15 PPM can cause illness and even permanent disabilities.

WHAT ABOUT OTHER "ALARMS" SOLD AT RETAILERS?

Store-bought alarms don't sound off until unsafe levels of 70 PPM or higher are present at the unit for 3-1/2 hours! By then it may be too late. Plug-in models don't always allow for proper placement and don't work during power outages. The NSI 6000 is battery powered for 24/7 protection.

WHY IS THE NSI 6000 A BIGGER INVESTMENT THAN THE OTHERS?

Accurate, low-level CO detection requires higher precision components & quality control. The NSI 6000 CO monitor uses the same technology and sensors as professional-grade CO analyzers used by contractors, fire departments, and utilities – often costing thousands of dollars. In addition, the NSI 6000 is equipped with Bluetooth technology which allows you to store your monitor's history with one or more smart devices, recording any CO events, and uploads the information to the cloud where your service contractor can review any occurrences of CO in your home – at no additional cost. And NSI's unique Continuous Scan™ mode lets you know the monitor is operational 24/7!

HOW MANY MONITORS SHOULD I HAVE IN MY HOME?

As with smoke detectors, you should have one monitor installed on every level of your home. A single-story home may need more than one depending on size and layout of the home.

WHERE SHOULD I PLACE THE NSI MONITOR?

CO is lighter than air. Monitors should be mounted at eye level and no lower. They should be placed in an area with good air circulation. If you have only one monitor it should be placed near the master bedroom. Other possible locations include above your thermostat(s), nursery, basement, rooms with fireplaces or gas logs, and near your heating system and/or hot water tank. Your professional installation contractor can help you determine the best location(s) in your home.

WHAT SHOULD I DO IF MY MONITOR GOES OFF?

Call your NCI CO-Certified contractor at any level below 70 PPM, unless you have symptoms. CO exposure can cause nausea, severe headache, shortness of breath, chest pain, blurred vision, and dizziness. If you experience these symptoms call 911 and leave the house immediately. Above 70 PPM, evacuate immediately. If you have symptoms, call 911 from a neighbor's house. Call your utility to turn off any combustion appliances until your NCI CO-Certified contractor can investigate the source of carbon monoxide.

THE NSI 6000 OFFERS REAL PROTECTION:

- Continuous Scan™ mode lets you know monitor is checking for CO – 24/7
- Bluetooth connectivity to your smart device and cloud storage of your monitor's history
- Digital display shows CO levels of 5ppm or higher
- 5-minute "Hush" button for levels below 70ppm
- Designed for wall installation or table-top use
- 5-Year Limited Warranty

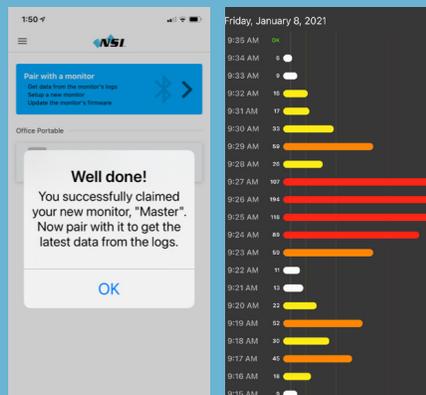

Low-level Alarm - 15ppm with audible & visual every 8 seconds

High Alarm - 35ppm with audible & visual every 4 seconds

Crisis Alarm - 70+ ppm with audible & visual every 2 seconds
